

SIGHT SYSTEMS

for Armored Vehicles and Remote Weapon Stations

The SIGHT family provides the full Applications Features package of EO/IR sensors needed to meet every operational challenge and to ensure quick target assessment and engagement.

The SIGHT family enables to detect, recognize and identify targets by providing a high resolution thermal and daylight image to the gunner/ commander from long ranges under day, night and severe weather conditions.

Powered by Edge AI with advanced image processing, ATR, and VMD, CONTROP systems deliver superior situational clarity and efficiency, easing operator workload and enabling faster, more confident decision-making.

The SIGHT family is primarily designed for sighting systems used in Remote Controlled Weapon Stations (RCWSs). Since the 1990s, CONTROP's EO/IR systems have been in worldwide daily operation on a wide variety of air, maritime and land platforms.
